COIN SYSTEMS

About Coin Systems

The Coin Systems team seeks to help address the complex challenges of cross border payments, simplify clients' liquidity funding needs and offer next generation corporate treasury services.

Our inaugural product solution, JPM Coin, is a permissioned system that serves as a payment rail and deposit account ledger, that allows participating J.P. Morgan clients to transfer US Dollars held on deposit with J.P. Morgan within the system, facilitating the movement of liquidity funding and payments in right time.

Where current infrastructure proves inadequate, Coin Systems technology solutions leveraged for JPM Coin have the capability to support advance payment types like DvP (Delivery versus Payment), PvP (Payment versus Payment) and machine-to-machine payments and to help solve common hurdles of traditional cross border payments.

OFFERINGS

Building Financial Infrastructure

Coin Systems has created a new payment rail designed from the ground up to support **domestic and cross-border payments**

Coin Systems can help enable corporate clients to make **programmable, real-time, multi-currency payments** using multi-bank shared ledgers*

On this foundation, we anticipate facilitating **payment applications for FX, securities settlement and other value-added services** made possible by J.P. Morgan-developed blockchain technology*

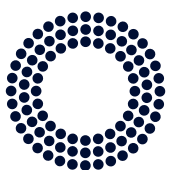

Corporate Treasury Solutions

Enables **24/7 transfers using blockchain technology** to help provide better treasury solutions to corporate clients with complex global treasury needs

We are exploring how to tap into fungible **cross-currency liquidity**, enabling creation of customizable structures like virtual accounts on blockchain, **multi-currency notional pools** and many more*

Our **programmable money** capability has the potential to **enhance liquidity management** for corporate clients through conditional

liquidity management for corporate clients through conditional payments governed programmatically by distributed ledger technology*

Contact us to learn more about the next generation payment network.
